

**Report Title: HERMES PC Farm Experience**

## **Current problems**

### **- stability of PC Farm;**

- due to a software the PC farm stability depends on hermes.desy.de; (several weak places were fixed already);
- Linux kernel bugs (2.0.30 #2, Jun 18 1997);
- about two times a month an overheating takes place due to broken processor cooling fans.

**All above give us in average 6.3 days between system restart for a PC.**
